

ANTERRA TECHNOLOGY

Corporate Performance
Management for Construction

ANTERRA VS. THE COMPETITION

Construction companies have many choices when it comes to data visualization and business intelligence tools. The value of converting raw data into meaningful business insights speaks for itself.

When comparing Anterra's CPM reporting capabilities with generic reporting tools like **Power BI, Tableau, and Domo** for construction finance, several key differences and advantages emerge.

Power BI displays in the familiar MS interface and is commonly used by SMB companies. Tableau is a bit more complex and can handle large datasets and complex queries. Domo, also known for its user-friendly interface, allows users to create custom visualizations and automate reporting processes without needing extensive technical skills.

However, only **Anterra integrates seamlessly with industry-specific software like Sage and Viewpoint**, providing real-time insights into job costs, project performance, and financial health.

By providing detailed visualizations of current performance and predictive forecasts, Anterra enables construction companies to make informed strategic decisions. This aligns with financial goals and helps in managing costs and timelines effectively.

Six Reasons Why Anterra is the Best Solution for Construction

Tailored for Construction

Specifically designed for the construction industry, Anterra addresses the unique challenges faced by construction companies. This includes detailed financial reporting, project forecasting, automated WIP reporting, and AR collection management.

Advanced Data Analytics

Anterra's Corporate Performance Management (CPM) platform leverages advanced data analytics to translate raw data into meaningful metrics. This includes tools for accurate job forecasting, backlog reporting, and gross margin visibility.

Construction-Specific KPIs

Anterra converts ERP accounting data into construction-specific Key Performance Indicators (KPIs), offering insights that are directly relevant to construction projects. This helps in making informed decisions based on real-time data.

Seamless ERP Integration

Anterra integrates seamlessly with construction ERP systems and project management tools, providing a unified view of a company's performance. This ensures that data from various sources is accurately aggregated and consistently presented.

Enhanced Financial Management

Anterra's platform includes features like consolidated financials and AR collection management, which improve cash flow and financial health. This is crucial for maintaining the financial stability of construction projects.

Pre-Built or BYO Widgets and Dashboards

Anterra's extensive collection of tools are tailored for construction and finance that streamline data analysis and reporting, making it easier for construction professionals to access and interpret critical information.
